TECHNICAL SKILLS

Languages: Java, Kotlin, Dart, TypeScript, JavaScript, Python, C, C#

Web: React, Next.js, HTML, CSS, Tailwind CSS

Mobile: Flutter, Android (Kotlin)

Database & Backend:

PostgreSQL, Supabase, Firebase

Tools: Git, GitHub, GitHub

Actions, Vercel, Playwright

LANGUAGES

English — Advanced

(Duolingo English Test, certs.duolingo.com/h14fcjt5modhp55o)

EDUCATION

Firat University — B.Sc.

Software Engineering, 3rd Year

Firat University — English

Preparatory Program, Completed

Inspimo Software & Coaching

(Elazığ Technopark) — Algorithms, Programming and Java Training

Uğur Yalın

Software Engineering Student · Full-Stack Web & Mobile Developer

ABOUT ME

I am a third-year Software Engineering student at Firat University, building end-to-end applications for the web (Next.js, TypeScript) and mobile (Flutter, Kotlin). I gained frontend experience at the university's Digital Transformation Office and team-based mobile development experience at Movio Yazılım. I built and deployed my personal website from scratch, including a database, an admin panel and automated tests. I am a curious, analytical engineering candidate who adapts quickly to new technologies.

EXPERIENCE

1) Mobile App Developer (Team Project) — Movio Yazılım

- Developed two Android apps, "Coffee Fortune" and "Swimming Spots", in Kotlin as part of a team.
- Used Supabase (PostgreSQL) for authentication and data storage.
- Integrated in-app advertising.

2) Frontend Developer (Student) — Firat University Digital Transformation Office

- Took an active role in the frontend development of the QR Attendance System used across the university.
- Designed and integrated user-friendly, responsive UI components.

PROJECTS

1) uguryalin.com — Personal Portfolio & Admin Panel (Live) | Next.js, React, TypeScript, PostgreSQL, Tailwind CSS

- Built a bilingual (Turkish/English) website with a secure admin panel for managing its content.
- 3D animated interface with Three.js and GSAP; unit, integration and end-to-end (Playwright) tests with GitHub Actions CI; deployed on Vercel and Neon.

2) ForeSight — Weather App | Flutter, Firebase

- Cross-platform mobile app with Firebase authentication and current and 7-day forecasts via WeatherAPI.

3) Orjeen Stock Tracking | C#, Supabase, Gemini AI

- AI-assisted desktop stock and revenue tracking system with Supabase role management (OOP term project).
- Other: Elazığ Cepte (Flutter, TÜBİTAK application); website interfaces for a jewelry store and a clothing store.
